hackerrank.com/challenges/py-hello-world/problem?isFullScreen=true

HackerRank | Prepare > Python > Introduction > Say "Hello, World!" With Python

Exit Full Screen View

Problem

Check Tutorial tab to know how to to solve.

Here is a sample line of code that can be executed in Python:

```
print("Hello, World!")
```

You can just as easily store a string as a variable and then print it to stdout:

```
my_string = "Hello, World!"
print(my_string)
```

The above code will print `Hello, World!` on your screen. Try it yourself in the editor below!

**Input Format**

You do not need to read any input in this challenge.

**Output Format**

Print `Hello, World!` to stdout.

**Sample Output 0**

```
Hello, World!
```

You have earned 5.00 points!

You are now 30 points away from the 1st star for your python badge.

14% 5/35

**Congratulations**

You solved this challenge. Would you like to challenge your friends?

```
Hello, World!
```

hackerrank.com/challenges/py-if-else/problem?isFullScreen=true

HackerRank | Prepare > Python > Introduction > Python If-Else

Exit Full Screen View

Problem

Check Tutorial tab to know how to solve.

**Task**

Given an integer, $n$, perform the following conditional actions:

- If $n$ is odd, print `Weird`
- If $n$ is even and in the inclusive range of $2$ to $5$, print `Not Weird`
- If $n$ is even and in the inclusive range of $6$ to $20$, print `Weird`
- If $n$ is even and greater than $20$, print `Not Weird`

**Input Format**

A single line containing a positive integer, $n$.

**Constraints**

- $1 \leq n \leq 100$

**Output Format**

Print `Weird` if the number is weird. Otherwise, print `Not Weird`.

**Sample Input 0**

```
3
```

**Sample Output 0**

Problem | Submissions | Leaderboard | Discussions

**Task**

The provided code stub reads two integers from STDIN, $a$ and $b$. Add code to print three lines where:

1. The first line contains the sum of the two numbers.
2. The second line contains the difference of the two numbers (first - second).
3. The third line contains the product of the two numbers.

**Example**

$a = 3$

$b = 5$

Print the following:

```
8
-2
15
```

**Input Format**

The first line contains the first integer, $a$.

The second line contains the second integer, $b$.

**Constraints**

$1 \leq a \leq 10^{10}$

$1 \leq b \leq 10^{10}$

**Output Format**

You have earned 10.00 points!

You are now 10 points away from the 1st star for your python badge.

71% 25/35

**Congratulations**

You solved this challenge. Would you like to challenge your friends?

hackerrank.com/challenges/python-division/problem?isFullScreen=true

HackerRank | Prepare > Python > Introduction > Python: Division

Exit Full Screen View

Check the Tutorial tab to know learn about division operators.

Problem | Submissions | Leaderboard | Discussions

**Task**

The provided code stub reads two integers, $a$ and $b$, from STDIN.

Add logic to print two lines. The first line should contain the result of integer division, $a$ // $b$. The second line should contain the result of float division, $a$ / $b$.

No rounding or formatting is necessary.

**Example**

$a = 3$

$b = 5$

- The result of the integer division $3//5 = 0$.
- The result of the float division is $3/5 = 0.6$.

Print:

```
0
0.6
```

**Input Format**

The first line contains the first integer, $a$.

The second line contains the second integer, $b$.

**Output Format**

Print the two lines as described above.

**Sample Input 0**

You have earned 10.00 points!

You are now 35 points away from the 2nd star for your python badge.

0% 35/70

**Congratulations**

You solved this challenge. Would you like to challenge your friends?
