DIGITAL LTERACY

vityarthi
YOUR LEARNING DESTINATION

Name – Naina Jha

Registration No. – 25BCE11087

Branch – Computer Science Engineering (Core)

Year – 1st Year

Course Titel – Digital Literacy

Course Code – CSE0001

Date of Submission – 29 March 2026

Introduction

This project is about learning and improving basic digital skills that are very important for students today. In our daily life, we use technology for studying, communication, and many other tasks, so it is necessary to know how to use digital tools in a smart and responsible way. Through this project, I worked on different activities that helped me understand digital literacy in a simple and practical manner.

While doing these tasks, I learned how to present information in a clear and creative way by making an infographic. I also created my profiles on GitHub, LinkedIn and Kaggle, which helped me understand how to build a digital presence and share my work online. Trying a coding platform gave me a basic idea of how programming works and helped improve my thinking and problem-solving skills. Along with this, I learned how to write proper and professional emails, and understood how small things like tone, clarity, and structure can make a big difference in communication.

I also learned about cybercrime and how to stay safe while using the internet. It helped me understand the risks of online activities and the importance of protecting personal information. Another important thing I learned was how to organize my work properly using folders and files, and how a simple README file can make a project easier to understand.

Overall, this project was a very helpful and interesting experience for me. It improved my digital skills, communication, and creativity. It also made me realize that these skills are not only useful for studies but also very important in real life.

Task 1: Digital Literacy Awareness Infographic

For this task, I created a one-page infographic on digital literacy using Canva. I chose Canva because it is simple to use and has many ready-made templates options, which made the design process easier, quicker. And it also improves the skill of designing. It also helps to improve the

In my infographic, I covered important points such as what digital literacy means, some useful digital tools for students, and basic safe internet practices. I explained how students can use digital tools for learning, communication, and productivity. I also included safety tips like not sharing personal information online, using strong passwords and being aware of online scams.

I tried to keep the design clean and easy to understand by using icons, short sentences, and proper spacing. I also make sure that anyone looking at it could quickly understand the message without feeling overwhelmed.

One difficulty I faced was deciding what information to include since there is a lot to say about digital literacy. It was interesting to learn how to present important ideas in a short and clear way. Overall, this task helped me improve my creativity, my ability to present information effectively and also my skill of designing.

Task 2: Build Your Student Digital Portfolio

For this task, I set up my profiles on GitHub and LinkedIn to start building my digital portfolio. Before this, I didn't really have a proper online presence, so this was my first time creating everything in a more structured way.

On GitHub, I created my profile and added a README file in a repository with my username. I wrote basic details like my name, branch, and year, along with a short line about what I want to learn. And I also made sure it was clear and understandable.

For LinkedIn, I filled in my education details like my degree, college, and expected graduation year. I added a few skills to make the profile look complete. I also

I made sure all the profiles had the required basic information, even though they are still quite simple. One thing I realized is that these profiles are not just for this assignment, but something I'll keep updating. In the next few years, I plan to add projects on GitHub, connect with people on LinkedIn. Overall, this task gave me a good start and made me realize the importance of having a digital presence.

Task 3: Explore Coding & Collaboration Platforms

For this task, I explored both coding practice and collaboration tools. I created an account on HackerRank and completed a beginner-level problem to understand how coding platforms work. I attempted a basic challenge which helped me revise simple programming concepts like input/output and logic building. It was not very difficult, but it gave me a clear idea of how problems are structured and solved step by step.

For the collaboration part, I used Google Forms to create a digital literacy awareness quiz. The form included 5 questions, with a mix of multiple-choice and short-answer types. I made sure the questions were simple, clear, and related to topics like internet safety, digital tools, and basic online practices. I also checked the response section in Google Sheets to see how answers are recorded and organized.

Overall, both tasks were useful in different ways. The coding platform helped me practice logical thinking, while Google Forms showed me how easy it is to collect and manage information. One thing I found interesting was how these tools can actually be used in real academic situations, like quizzes or practice problems. This task helped me understand how these platforms can support both learning and collaboration.

Task 4: Email Etiquette & Digital Communication

For this task, I learned how to write professional emails and communicate properly online. I wrote two emails—one to a professor asking for an extension, and another to apply for a summer internship. While writing them, I focused on keeping the subject clear, using polite language, and organizing my message properly. It was not too hard, but it helped me understand how important tone and clarity are in emails.

Next, I created a Social Media Do’s and Don’ts checklist. I included simple points like thinking before posting, being respectful, and not sharing personal information. I kept the checklist easy to understand and useful for students like me.

I also wrote a short scenario about poor digital communication. It showed how using informal language and not being clear in an email can cause problems. This made me realize how important it is to communicate properly.

Overall, this task was helpful. It improved my email writing skills and made me more aware of how to behave online. I found it interesting that small things like tone and word choice can make a big difference. This task showed me how these skills are useful in both college and real life.

Task 5: Cybercrime Awareness Case Study & Prevention Guide

For this task, I focused on organizing my work properly and making sure everything was complete. I created a folder named task-5-cybercrime/ and stored all my files inside it in a clear and structured way. This helped me keep my project neat and easy to access.

I made sure that all the required files were included. I added the case study file, where I explained the selected cybercrime in detail, including how it happens step by step, who is usually targeted, and what the consequences are. I also included the prevention checklist file, which has more than 8 simple and practical safety tips. Some of these tips were specifically related to UPI and online payment safety, and I also added the official reporting details like the cybercrime portal and helpline number.

In addition, I created a README file to explain the project clearly. In the README, I described what the task is about, listed all the files, and gave a short explanation of each one. This makes it easier for anyone to understand the project without confusion.

Overall, this task was very useful for me. It helped me learn how to organize files properly and make sure all requirements are completed. I also realized how important a clear folder structure and a good README file are in making a project look professional and easy to understand. This task improved both my organization and documentation skills.

Conclusion

Overall, this project was a very useful learning experience for me. It helped me understand important digital skills in a simple and practical way. Through each task, I learned something new and improved my knowledge step by step. It was not just about completing the work, but also about understanding how these skills are useful in real life.

I learned how to present information clearly, build a basic digital presence, and improve my logical thinking through coding. Writing professional emails helped me understand the importance of tone and clarity in communication. I also became more aware of cybercrime and how to stay safe online.

Another important thing I learned was how to organize my work properly and make it easy to understand. This project also improved my creativity, communication skills, and confidence.

In the end, this project helped me learn new things and become more comfortable using technology, which will be helpful for me in the future.
